# AWK-1131A Series

*Entry-level industrial IEEE 802.11a/b/g/n wireless AP/client*

## Features and Benefits

• IEEE 802.11a/b/g/n AP/client support

• Millisecond-level Client-based Turbo Roaming[1]

• Integrated antenna and power isolation

• 5 GHz DFS channel support

## Certifications

## Introduction

The AWK-1131A industrial wireless AP/client meets the growing need for faster data transmission speeds by supporting IEEE 802.11n technology with a net data rate of up to 300 Mbps. The AWK-1131A is compliant with industrial standards and approvals covering operating temperature, power input voltage, surge, ESD, and vibration. The two redundant DC power inputs increase the reliability of the power supply. The AWK-1131A can operate on either the 2.4 or 5 GHz bands and is backwards-compatible with existing 802.11a/b/g deployments to future-proof your wireless investments.

### Improved Higher Data Rate and Channel Capacity

• High-speed wireless connectivity with up to 300 Mbps data rate
• MIMO technology to improve the capability of transmitting and receiving multiple data streams
• Increased channel width with channel bonding technology
• Supports flexible channel selection to build up wireless communication system with DFS

### Specifications for Industrial-Grade Applications

• Redundant DC power inputs
• Integrated isolation design with enhanced protection against environmental interference
• Compact aluminum housing, IP30-rated

## Specifications

### WLAN Interface

1. The Turbo Roaming recovery time indicated herein is an average of test results documented, in optimized conditions, across APs configured with interference-free 20-MHz RF channels, WPA2-PSK security, and default Turbo Roaming parameters. The clients are configured with 3-channel roaming at 100 Kbps traffic load. Other conditions may also impact roaming performance. For more information about Turbo Roaming parameter settings, refer to the product manual.
2. DFS (Dynamic Frequency Selection) channel support: In AP mode, when a radar signal is detected, the device will automatically switch to another channel. However, according to regulations, after switching channels, a 60-second availability check period is required before starting the service.
